

Follow these 5 easy steps to set up and use your portable solar panel

1

### Unfold and Position

- Unfold the panel and place it in full direct sunlight
- Use the kickstand case to tilt the panel directly toward the sun
- Fastest charging occurs from 10am–2pm, adjusting angle as the sun moves

2

### Connect to your Power Station

- Use the MC4 connectors on the panel to plug into an MC4 to XT60 cable
- Connect the XT60 end to your power station's solar input
- The panel begins working automatically — no buttons needed

3

### Maximise Charging Performance

- Keep panel clean and unobstructed — wipe dust gently with a dry cloth
- Keep in sunlight - not in shade, indoors, or behind glass
- Avoid laying flat on the ground — angle it for airflow and capture

4

### Use Safely

- IP67-rated — safe in light rain, but never submerge
- Do not bend, crush, or drop the panel
- Always use the kickstand — do not place directly on hot concrete or metal
- If the panel feels too hot to touch, move it to improve ventilation

5

### Connecting Multiple Panels - Series vs Parallel

*You can link panels together for faster charging, but only if done correctly*

- Parallel is recommended for most users (same voltage; higher amps)
- Advanced users can increase voltage with series connection
- See our website for series vs parallel configuration options
